

# PEPFAR

U.S. President's Emergency Plan for AIDS Relief

## PrEP

# NSF 2017-2022

- Programme Strategic Objective
  - To accelerate the provision of PrEP to reach 2,500 people at substantial risk of acquiring HIV by 2022.
- Target population:
  - HIV negative people at substantial risk of acquiring HIV including sero- discordant couples, MSM, FSW and Adolescent Girls and Young women (AGYW).

# COP18:

## PrEP Technical Considerations

- PrEP is a key cross-cutting approach.
- PrEP use as part of a package of comprehensive prevention services, and integration of PrEP services into existing prevention or treatment services for target populations.
- Key steps for systematic roll-out of oral PrEP are:
  - Policies and guidelines;
  - Targeting and costing, particularly priority populations and geographically;
  - Commodities and drug registration;
  - Programming and service delivery;
  - Communications and demand creation; and
  - Monitoring and evaluation.

# FY17 PrEP\_NEW Results

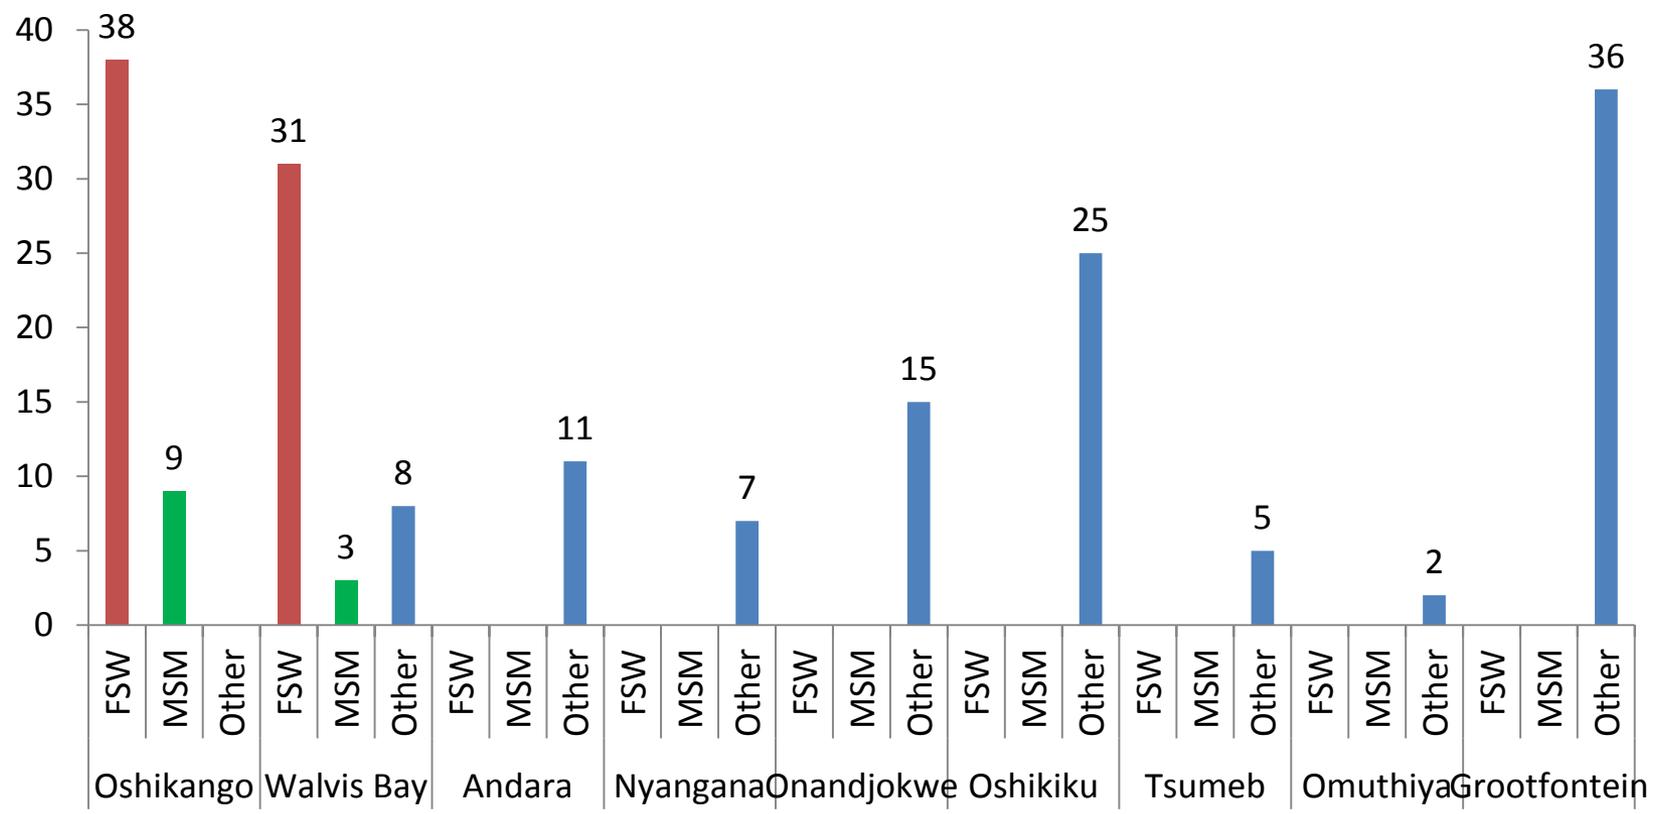

- Since start of PrEP implementation in June 2017 207 clients initiated.
- Regulatory approval was granted in May 2017 for Ricovir-M. This allowed scale up of PrEP
- PrEP\_NEW included in the NSF
- Media seminars have been held to educate media on clear PrEP messaging and reporting
- Majority of clients are key populations and people living in sero-discordant relationship.
- Stop gap procurement for Ricovir-M to fill current stock out

# FY17 PrEP\_NEW Results

PrEP\_NEW

# Oral PrEP rollout Scenarios

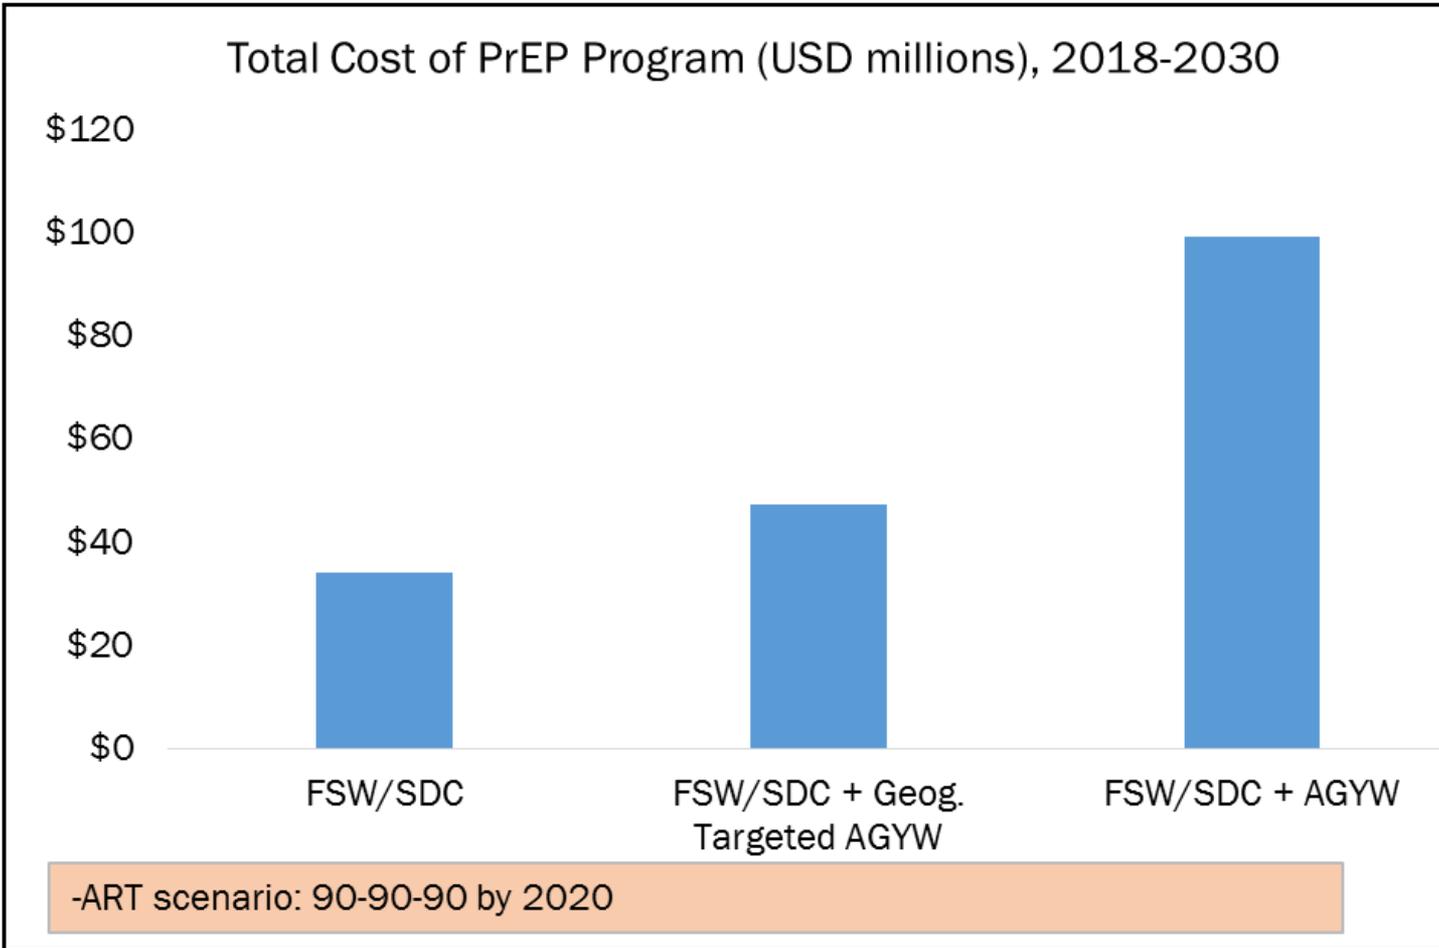

- FSW/SDC:
  - National Oral PrEP rollout for key populations only and sero-discordant couples
- FSW/SDC+ Targeted Geographical
  - Same as above plus oral PrEP roll out for medium risk AGYW ages 15-24 in regions with higher than median HIV incidence
- All Risk Groups:
  - National PrEP roll out of everyone at risk

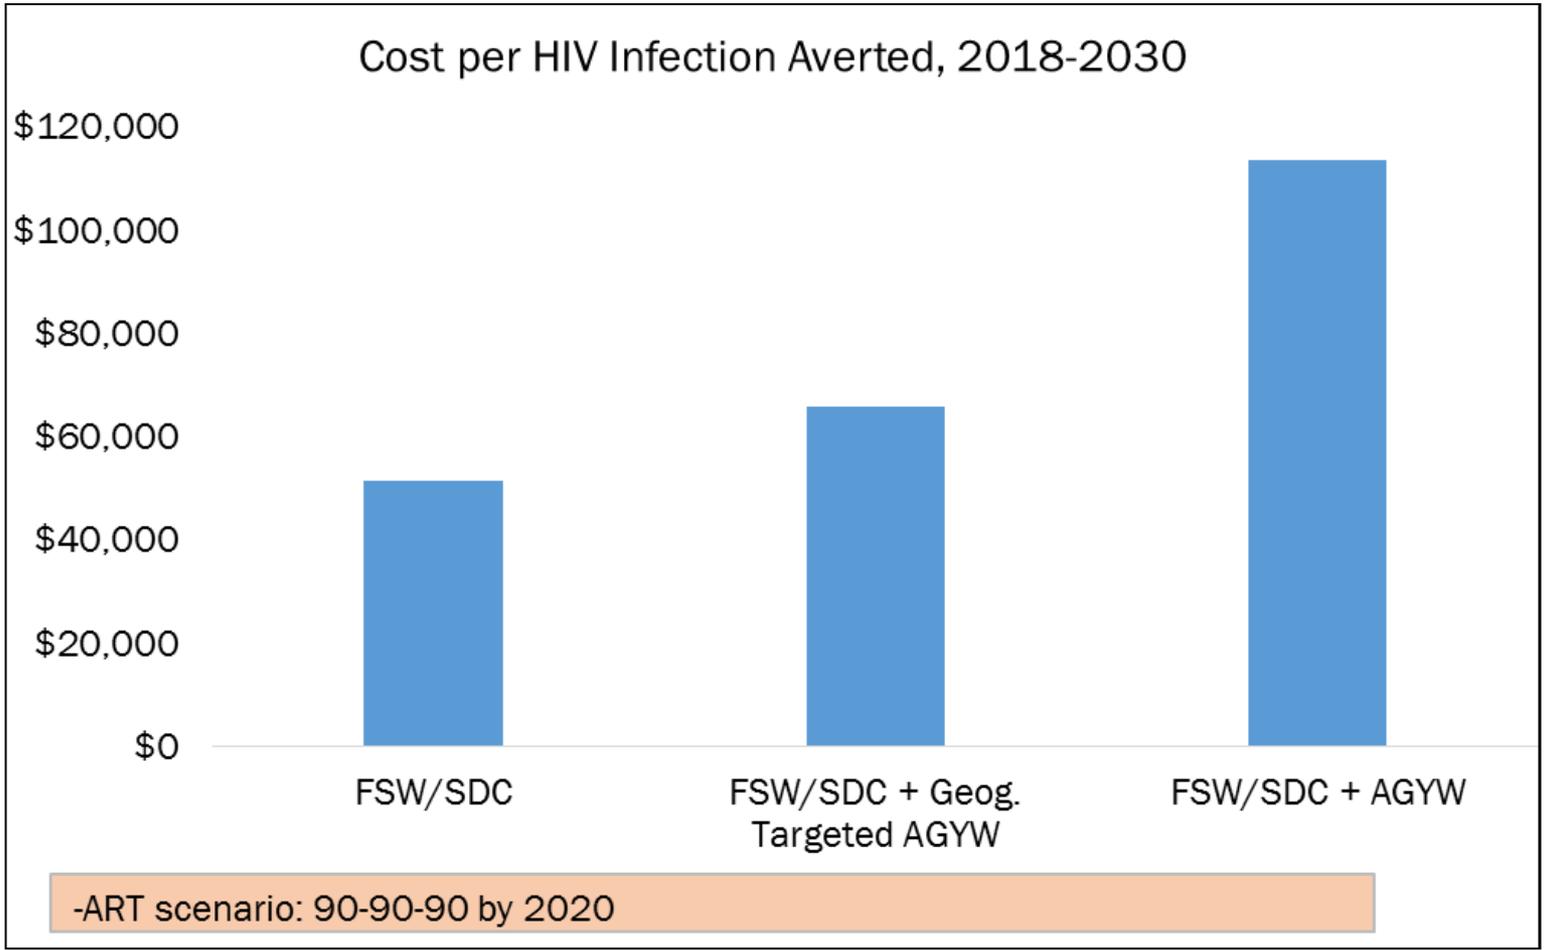

PEPFAR

# Total Cost of adding PrEP into the National program depends on the size of the target population

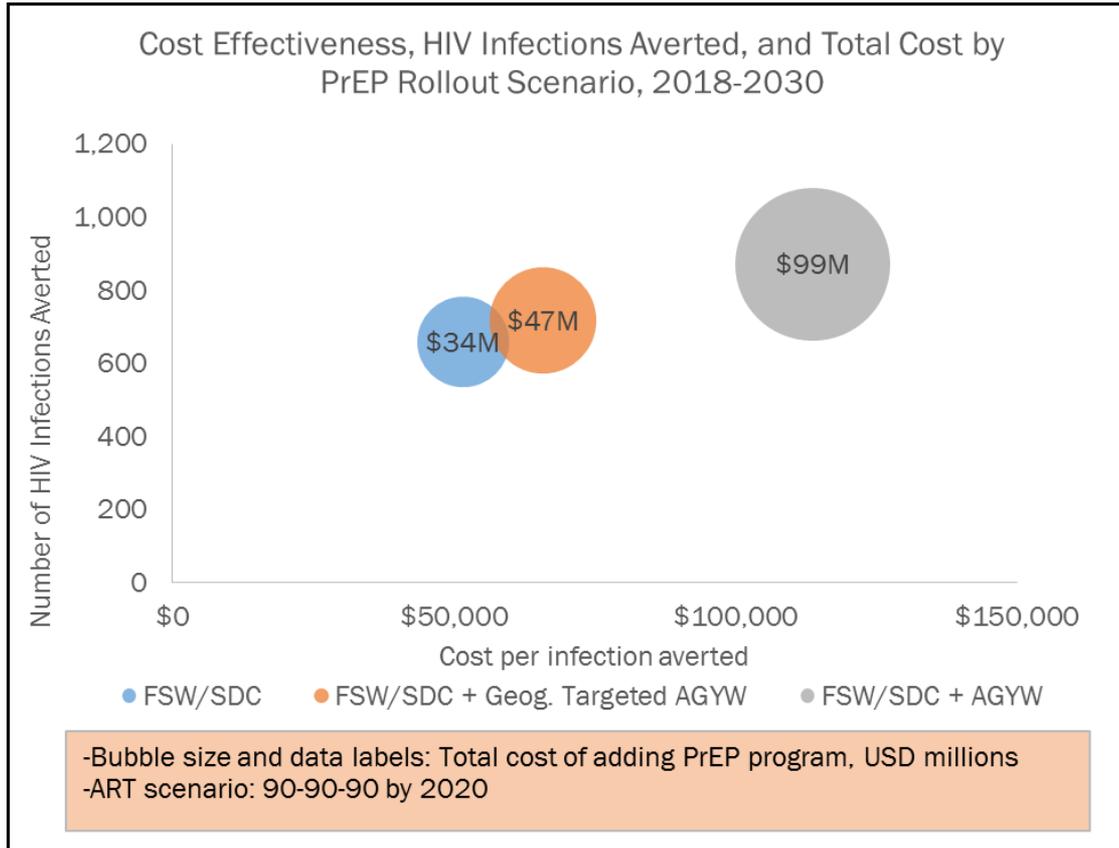

# Cost effectiveness of rolling out PrEP

# Cost Effectiveness

Expanding PrEP for young women can increase impact but is less cost effective
